Professional Experiences

Langaroo - Backend Engineer Aug 2025 – Present

Langaroo is a social communication platform combining real-time chat, voice/video calling, social feeds, and an in-app token economy (LangPay) for a global community-driven network with marketplace and monetization features.

- Designed and built the real-time chat system that now supports 1,000+ users chatting at the same time, with messages delivered ~30% faster than before. The system scales smoothly as the user base grows
- Launched voice, video, and livestream features that increased average user session time by ~15% and now handle around 300 calls per day, including call transcripts and real-time push notifications
- Built LangPay, the in-app wallet and purchase system, which now processes ~\$5K and 200+ transactions every month with less than 1% accounting discrepancy, giving the finance team reliable, automated daily reconciliation
- Shipped the social feed (~10K views per day) with AI-powered content ranking that boosted click-through rate by ~15%, while keeping the feed fast and free of duplicate posts

rePrecinct - Full Stack Software Engineer Sept 2024 – Aug 2025

rePrecinct is an AI-powered CRM and deal management SaaS platform purpose-built for the Australian commercial real estate industry.

- Built an AI-powered lead matching feature that helps agents prioritize 500+ leads per week, cutting the time spent on manual lead review.
- Connected the platform to major Australian listing portals (Real Commercial, CommercialRE), automatically capturing 2,000+ leads every month and eliminating manual data entry for 100+ agents
- Created an email marketing tool that lets agents design reusable campaign templates and send them at scale, now powering 10,000+ marketing emails per month
- Made the CRM dashboard faster to load for daily users, giving agents a smoother experience on the screens they use most

Rantir – Full Stack Software Engineer Feb 2022 – Sept 2024

Rantir is a no-code SaaS platform (think Retool + Airtable) that lets teams build internal tools, AI workflows, and customer apps on top of managed, per-customer Supabase instancesm targeting US SMBs and HIPAA-regulated healthcare verticals.

- Designed a “Bring Your Own Cloud” system that gives each customer their own isolated database, unlocking the HIPAA-compliant \$299/month plan, which is roughly 6× the revenue of the base plan. This opened the door to healthcare and other regulated customers.
- Made the main Projects dashboard noticeably faster for ~200 active customer workspaces by cutting redundant backend calls by ~70%.
- Shipped the paid subscription system across a 4-tier pricing model (Free / \$49 / \$99 / \$299), gating premium features like the AI assistant and Cloud provisioning. Built in a safety switch so the team can roll back changes instantly if anything goes wrong.

Manucentric - Lead Software Engineer

Mar 2021 – Jan 2022

Manucentric is a B2B SaaS providing cloud-based order management and online catalogue software for the woodworking and cabinet manufacturing industry in North America.

- Built the ManuOrder platform from the ground up as the first engineer and technical lead using ASP.NET Core, delivering core features, online catalogue, order management, invoicing, and work order generation, now used by cabinet shops across North America
- Built integrations with the major woodworking design tools used by customers (CabinetVision, Mosaik, Microvellum, PanelMetrix), removing the need for manual data re-entry and cutting order-to-production time
- Built the pricing and quoting engine that lets customers generate their own quotes 24/7, processing 1,000+ orders every month and freeing shop owners from manual price calculations
- Set up the engineering foundations, development practices, code quality standards, automated deployment pipelines, and subscription billing, that supported the company's product launch.

Projects

WhatsApp Operations Dashboard

A real-time admin dashboard for managing WhatsApp-driven field operations, installation schedules, message history, and user accounts, with live KPIs, advanced filtering, and bulk import/export

- Built live dashboard with KPI cards (daily schedules, 24h inbound/outbound messages), upcoming jobs widget, and top-branch analytics
- Shipped schedule management with date/branch filtering, full CRUD, bulk file import, and CSV/Excel export.
- Implemented role-based authentication (cookie-based JWT, middleware route protection) and full CRUD for admin/employee accounts
- Delivered responsive UI (mobile/tablet/desktop) with dark mode support across the entire app

Tech: Next.js, Express.js, PostgreSQL

Ask Ellie

A full-stack B2B SaaS platform where organisations deploy an AI copilot, voice & text, that answers Medicare, retirement, Medicaid, and veterans benefit questions for employees and retirees, with an employer analytics dashboard and Stripe-powered per-seat billing.

- Built AI chat & voice copilot covering Medicare, retirement, Medicaid, and veterans benefits, deployed by employers and brokers to educate employees at scale
- Built organisation dashboard with session analytics, engagement rate tracking, and top-questions insights to help HR teams measure copilot usage
- Implemented multi-role auth & account management with Supabase, supporting employer, broker, and employee access tiers
- Shipped tiered per-seat Stripe billing with automatic volume discounts across multiple pricing tiers
- Delivered Guided Learning Paths, a resource library, and an FAQ system to complement the AI copilot experience

Tech: Next.js, Supabase, Stripe

Education

Binus University - Bachelor of Computer Science

Jul 2017 – Aug 2021

- GPA: 3.52 / 4.00

Skills

Languages: Python, Java, Javascript, Go, Typescript, SQL, Flutter
Technologies: React.js, Next.js, Nest.js, Angular, ASP.NET Core, Laravel, Gin
